

New!

Roto-Vert™

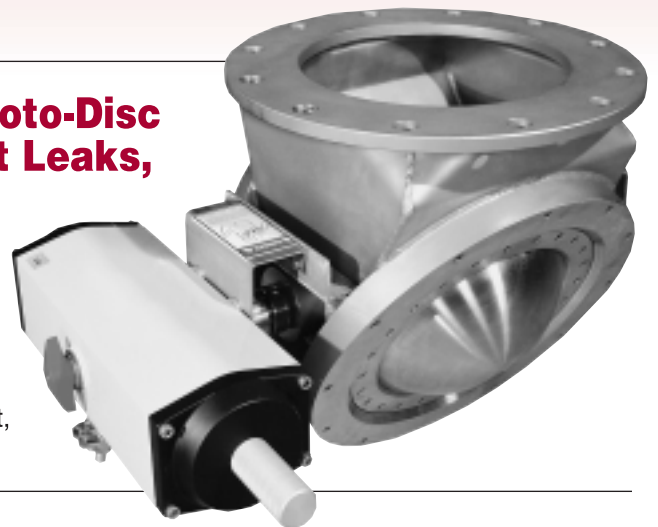

**HEAVY-DUTY
DIVERTER VALVE
THAT WON'T GUM
UP, JAM, OR
CRUSH YOUR
PRODUCT EVEN
UNDER THE
WORST
CONDITIONS**

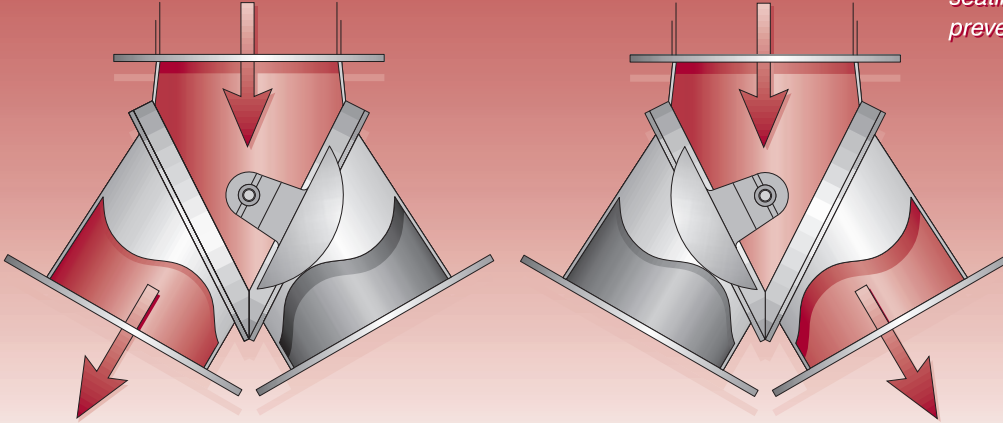

The Roto-Vert Utilizes a Design that the Roto-Disc Company has used for 20 Years to Prevent Leaks, Jams & Product Breakage

Sticky and gummy powders, abrasives, pellets, ores and granular substances. Almost anything that runs through a process line can be run through this amazing workhorse valve — day after day — with incredibly low maintenance.

Next time you have a valve that gums up, jams or pinches your product, remember Roto-Vert. It can end your diverter valve headaches forever.

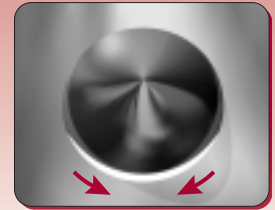

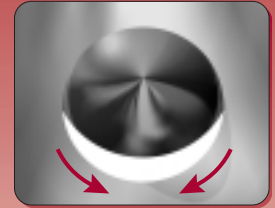

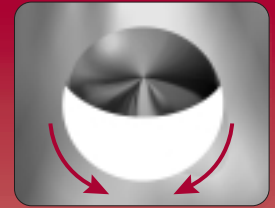

New, Heavy-duty Roto-Vert™ Clean Flow Diverter Valve

The scissor-like wiping action as the dome slides against the seat, helps prevent product pinching or jamming.

The rotating action of the dome against the seal allows for higher seating preload and prevention of leaks.

Materials

- Body and Dome: ductile iron, stainless steel, high alloy steel or aluminum
- For abrasive material: contact surfaces can be coated with Tungsten Carbide and/or Stellite®

Actuators

- Manual handle with locking grip or handwheel
- Air or electric 180° rotation
- Most standard brands and controls can be used

Mounting

- ANSI 150# flanges

Accessories

- Square-to round transitions

Applications

- Sticky, gummy, pelletized or granulated substances
- Sanitary design for food or pharmaceuticals
- Instant diversion, scale, fill valve
- Metal reject systems
- Highly abrasive flows
